

Beyond Health

Backend Assignment

Problem Statement:

In this assignment, you will have to design a 4-page web app,

- The first screen is a user data form, which will collect name, date of birth, and gender
- The second screen is a screen where the user will be asked to input a PDF file
 - The file will contain a table with multiple rows and columns
 - There will be a 'submit' button
- The third screen is a display screen
 - This screen should display the uploaded files list, the total number of rows, the time of upload, and user details.
 - The items should be clickable, and they should take to the last page, which will be the file details page.
- The last page will display the rows corresponding to the selected files and other detail.
 - Formatting is not that important

Evaluation Parameters:

- Completeness - all components of the problem should work for the average user
- Architecture (how extensible is the code to solve future enhancements).
- Code quality.

Although, node.js is the preferred programming language. You are free to choose the programming language and database.
